

Please reject NAB petition 04-160. I enjoy the traffic and weather service provided by XM and do not wish it to be taken away via legislation. The first means people pursue when they cannot or do not wish to compete in a free market is to get legislation passed to hinder competition. In a free market, superior products and service must be allowed to compete for the consumers benefit even if this means change. Change is a constant in the market. Congress would not ban email to protect the US Mail service business. And so the market must decide on this issue.
